

Clear Creek Community Services District is excited to announce a comprehensive cross-connection control program, launching with the support of HydroCorp, a leader for over 40 years in water safety and compliance. The District will adopt policies and procedures related to water safety and conduct on-site cross-connection control surveys to support clean water throughout the community.

The program will encompass both residential and commercial properties, with the goal of securing the entire water system. It is set to launch in May, and HydroCorp will begin conducting on-site surveys to identify unprotected cross-connections and provide recommendations to improve backflow prevention measures.

By implementing this program, we can ensure that our water system and every connection throughout our community is protected. Not only will this help us keep track of potentially hazardous cross-connections, but we can also make sure every resident and business is properly informed of the risks and best practices to maintain safe drinking water.

The city's water safety and compliance activities will now include:

- **A cross-connection control plan based on best practices:** The plan, customized to Clear Creek Community Services District, is compliant with federal requirements, California regulations, and industry standards. From surveys and survey frequencies to backflow prevention techniques.
- **On-site surveys:** Surveys will detect backflow hazards and ensure the proper installation of any backflow preventers across the community.
- **Comprehensive activity and compliance reporting:** Clear Creek Community Services District will track program activities, including surveys, and ensure regulatory compliance.
- **Public education initiatives:** Everyone plays a role in protecting Clear Creek Community Services District's water system. A core aspect of cross-connection

control is helping residents and businesses understand the risk of backflow and how to keep their buildings compliant.

Clear Creek Community Services District has partnered with HydroCorp to ensure best practices and minimize disruption and cost to community members. Property owners will receive advance notice of any surveys and a member of HydroCorp's team of trained and certified technicians will complete the survey efficiently and professionally.

About HydroCorp

For more than four decades, HydroCorp has been dedicated to advancing drinking water safety and compliance nationwide. Specializing in cross-connection control, backflow prevention, and detailed piping system schematics, HydroCorp stands out for its integrated use of technology and deep industry expertise. The company's commitment to excellence is reflected in its history of delivering top-tier water management solutions. For additional information, visit www.hydrocorpinc.com.
